

TRANSPORT & LOGISTICS

Today it is possible to optimize the various phases of transport and logistics, both critical to the overall efficiency of a business, with complete, **high performance technological solutions** which track goods from the warehouse to delivery and return precise, timely information about the status of the process. Warehouse operators require **highly versatile and reliable equipment** capable of working in a variety of conditions and in combination with accessories that make them fully usable even **on the move**.

WAREHOUSE

A smart warehouse which fills orders in an agile, dynamic fashion using personalized software and hardware: it optimizes warehouse management in real time by speeding up reception and picking, as well as filling orders and booking goods.

DSD

Optimizes the mobility of goods, improves delivery times and offers outstanding customer care with highly innovative solutions for fleet and delivery management. It guarantees uninterrupted connectivity, active process management and total conformity with applicable regulations.

INVENTORY AND RESTOCKING

Simplifies daily monitoring, picking, shipping and delivery operations with proper inventory management. Continuously monitors the availability and locations of an article.

MAIL AND COURIERS

Acquires critical order tracking information, from collection to final delivery, and optimizes delivery times with a device which uploads maps and acts as a satellite navigator.

OUTDOORS WAREHOUSES AND GATES

Exploits the advantages of highly resistant tools with data SIM cards and remote reading from a distance even in unfavourable conditions and a wide range of temperatures.

COLD/FRESH CHAIN

Ensures proper, safe and regulatory transport with integrated technologies for monitoring room conditions on the move in real time.

PACKING AND STAGING

Improves the efficiency of daily scan and print operations with integrated solutions that communicate in real time.

PETROCHEMICALS AND CANISTER TRANSPORT

Select reliable tools that assure a high level of safety and efficiency and improve operations in the field.

Custom improves and speed up transport and logistics with integrated read&scan solutions which read all principal barcodes and are compatible with many types of printer, for on-demand printing on the move, using on-board NFC technology and data SIM cards.
